

Special Consumer Awareness Report!

“The Secret To Smiling More Confidently, Have Better Fitting, Stronger, And More Reliable Teeth!”

**Discover New Methods Of Having The Teeth &
Smile You Want With Comfortable, Anxiety Free Dentistry!**

- ✓ **Do you look in the mirror and see a smile that embarrasses you?**
- ✓ Have you had bad dental experiences in the past?
- ✓ **Do you have MISSING teeth, FAILING teeth or ill-fitting dentures that just don't work?**
- ✓ **Are you tired of social embarrassment**, not getting noticed by that special someone or looking older than you are?
- ✓ **Do you seriously desire to CHEW COMFORTABLY and knock 10 years off your appearance?** (Hint: Many of our patients claim that most people rave about how they look like they've “lost weight, gotten a haircut, and look 10 years younger” as a bonus from their new smile)
- ✓ Do you secretly desire **to have a bright, white, healthy smile, preserve your existing teeth and live a longer, healthier, happier life?**
- ✓ Are your existing dental problems most likely due to putting off dental care because of **fear, anxiety, or a busy schedule?**

If you've answered “YES” to any one of these questions then this report may just be the most important and emotionally life changing one you've ever read.

Many people who used to have missing, failing teeth, or loose/ill-fitting dentures are now telling me how they are eating and truly enjoying the foods that they haven't been able to eat in so long. They are actually **tasting the foods they're eating**, and don't have to mess with denture adhesives, through the miracle of their new dental implants.

In the past, when someone lost a tooth or many teeth, the most common approach to solving that dental problem was to put in a partial or a full denture. However, with the advancements in dentistry you can have stronger, fully restored teeth, while giving you the appearance of a natural looking and fitting teeth with dental implants.

What are Implants?

The dental implants used by most dentists are root-form implants; which basically means that they are replacement, or substitute tooth roots, used to replace natural tooth roots in areas of the mouth where teeth are missing. Since it replaces the tooth root, it creates the stability needed to have much stronger teeth that stay in place and don't move around.

10 Major Benefits Of Dental Implants!

- 1. You Will Look 10 Years Younger-** Dental Implants assist you in looking and feeling younger, because they prevent bone loss. By preventing bone loss that would normally occur with the loss of teeth, your facial structures remain normal and intact. The chances of wrinkling and the look of old age before your time is less likely. Implants prevent the bone loss that would normally occur with the loss of teeth.

In other words, everyday that you continue to wear dentures, or have missing teeth, you are experiencing bone loss, which makes you look much older than you have to. By using dental implants **your facial structures and jaw remains strong, health, and intact.**

2. **Overall quality of life is enhanced with replacement teeth that look, feel and function more like natural teeth.** You will look younger and more attractive which allows you to be even more confident and enjoy smiling, laughing, and talking with others.

3. **You can now live longer, because you'll get to eat better and prevent malnutrition or stomach problems!** Fresh vegetables, corn, and fruits are back on the menu! You can now eat the foods you like. Also, since your chewing is improved, your digestion will be even better as well!

4. **More Confidence in social situations.** Most of our patients love their new implants, because of their improved appearance, function, comfort and health. When you go out in public, you will never have to cover your mouth with your hand, or put off eating out of fear of a denture popping out or gagging you. Also, the improved appearance of your new smile will have people giving you compliments galore.

5. **Allows you to relax and not have to worry about your dentures moving around, popping out, or gagging you.** You'll never worry about your dentures flying out when you laugh, sneeze, cough, or when you eat. Implants are so securely attached that the fear of them falling out will be eliminated! Like I said before, these will feel like they are your natural teeth.

6. **Your mouth will be restored as closely as possible to its natural state.** By replacing the entire tooth, as well as the tooth root, it is possible to replicate the function of natural teeth, with a strong, stable foundation that allows comfortable biting and chewing. Also, nothing in the in the mouth looks or feels false or artificial!

7. **Increases the amount of enjoyment you get out of eating.** You will be able to **taste foods more fully.** Wearing an upper denture can prevent someone from really tasting food, as the roof of the mouth is covered. With implant supported replacement teeth, it is not necessary to cover the roof of the mouth, so you can truly enjoy the taste of foods.

8. **Improves overall oral health and decrease the risk of oral cancer and heart disease.** It is much easier to care for implants of any kind versus dentures. Your chances of bacteria build up, and gum disease decreases when you have implants.

9. **Eliminate Denture Adhesives FOREVER!** Since implant supported teeth are securely attached to the implants, there is no need for messy dentures adhesives.

10. **Your other teeth will not be affected because of missing teeth.** Since replacing missing teeth with implant supported crowns and bridges do not involve the adjacent natural teeth, they are not compromised or damaged. For example, when you wear a partial denture, you have clamps that hook onto adjacent teeth, which puts pressure on them that causes them to loosen and come out. Fixed Bridges require grinding down of the adjacent teeth so that the bridge can be cemented on them. This tooth structure can never be replaced and the long-term health of these teeth is compromised.

The benefits of implants far outweigh the benefits of wearing dentures or living with missing teeth.

What we've found is that most people who do NOT choose implants simply don't because they either were never given that option or they didn't have all their questions answered.

Below is a list of the most commonly asked questions that we receive from people just like you. Some may not apply to you. Just skip those and go on to the next one that does.

Most Frequently Asked Questions

Q: How Painful Is Getting Dental Implants?

A: Most of our patients report that they feel very little if any pain during the procedure. In fact, many patients do not have to use any pain pills. Your decision to use implants will help you to avoid much pain and discomfort in the long term.

Q: How Long Will It Take To Complete The Treatment?

A: You will notice a difference almost immediately. However, the entire process can take anywhere between 3-9 months to complete. This depends on the type, and quantity of implants you need, along with the quality of bone in which the implants are placed.

Q: Will I Need To Have One Implant Placed For Each Tooth That Is Missing?

A: No. In fact it is possible to replace all of the lower teeth with an over denture that is supported by only 2-4 implants. On the other hand, sometimes it might work to your advantage to replace your back teeth with an implant for each tooth to provide additional strength.

Q: How Do I Know If I'm Too Old For Implants?

A: Great question. Your overall health and your desire to improve the quality of life are much more important things to look at, than your age. We currently have patients from 20 years old to 78+ years old. There have been reports of people who are in their 90's and having this procedure done with no problems.

Q: How Long Do Implants Last?

A: Most research has shown that implants have been successful for over 30 years. However, our goal is to make them so they last a lifetime. This is much improved from dentures, which last about 5 years, and/or bridges where the expected time of use is between 7-10 years.

Q: What is the Cost Of Implant Treatment?

A: Many people call and ask us, "How much is one implant going to cost?" While I wish it was that simple, the only way to determine actual cost is by coming in for a consultation and examination. Obviously, costs vary greatly depending on your needs and desires. Some people choose implants, rather than a cruise as an anniversary present to each other.

So yes, you will need to look at implants as an investment, because it really is a significant decision. Implants truly are long-term investments. A cruise or other trip ends after just a few days. A healthy mouth, or magnificent dazzling smile pays dividends in many ways **for your entire life**. Dental implants are admittedly not the least expensive option. If your primary concern is lowest possible investment, then dental implants are not for you.

Q: I want to know if I'm a candidate, but I don't want to go to an office that is pushy or tries to sell me? What can I do?

A: Great Question. First, here's what I'd like to offer you:

A FREE Dental Implant and Healthy Smile Consultation!

When you call us at (732) 530-5111, we will have you come in for a brief (half hour or so) time to evaluate your condition, look at your teeth and gums, and most importantly, find out what it is YOU WANT. Simply put, you get to tell me what you want! And that's it. If, at the end of the consultation, you do not feel like we can help you that's fine. There is NO PRESSURE from us at all. We are simply here to help you find out what you want to do.

I'll be happy to discuss your options and answer your questions when you come in for your **FREE Dental Implant & Healthy Smile Consultation** – without obligation of any kind.

Denise DiBona, DDS, LLC
